SHORTLIST INTERVIEWED

**Assignment mission:** The company has been investing in the development of an open-source platform that allows clients and partnering organizations to benefit from the unparalleled scientific library. As the process generates a huge amount of data, the organization realized the need to attract an IT leader who could create the necessary infrastructure and manage the continuously increasing Intellectual Property.

**Process and outcomes:** In close collaboration with the client, we conducted extensive research across Europe, and we identified a range of niche specialists and recognized leaders in the fields of AI, Data Science, Machine Learning, Robotics, Bioinformatics, and 4.0 automation. After several rounds of meetings and internal discussions and Board meetings, the process culminated with the attraction of an exceptional leader who relocated to the UK from the Nordics.
